Who are the safest drivers?

According to a recent study, young and inexperienced drivers are the most likely to have an accident. Older drivers are usually more careful because they have more experience on the road. However, young men have the highest accident rate as they often drive faster cars and take more risks. Speeding, reckless driving, and ignoring traffic rules are common reasons for their accidents.

One interesting finding from the study is that passengers can influence how drivers behave. When young male drivers have their friends in the car, they tend to drive more dangerously to impress them. However, if their wives or girlfriends are passengers, they drive more carefully. On the other hand, female drivers become less safe when their husbands or boyfriends are in the car, possibly due to distractions or pressure.

Both men and women tend to drive more safely when their children are with them. This suggests that passengers can have a strong effect on a driver's behavior, making them either more cautious or more reckless.

My uncle is working at a car company that is developing a modern flying car. This future car will have solar panels on its roof and wings, allowing it to charge its battery while moving. It will operate on roads during light traffic and switch to flight mode when there is heavy traffic, helping passengers avoid delays. Impressively, it can carry up to eight people at a time.

Another exciting feature is its autopilot system, which means no driver is needed. This allows passengers to relax, read books, or play games during their journey. It makes travelling more enjoyable.

At first, I was a bit concerned about the safety because it is a driverless vehicle. However, my uncle explained that it would be safer than a traditional car. Since it uses solar energy, it is also more eco-friendly. I believe this flying car will change the way we travel in the future.

(Adapted from workbook Global)

Many experts have tried to make English easier to learn. (30)....., Professor Ogden invented Basic English in 1930. It had only 850 words, so students could learn it quickly and remember most of them. (31), they could only write simple messages and found real English hard to understand when reading newspapers or listening to native speakers. Later, a Swedish professor created Anglic, a version of English with easier spelling that looked more like how people spoke. However, Anglic didn't become popular because people were already used to traditional spelling.

Today, English is used on the Internet in a modern way. (32) NetLingo, people write short phrases like "OIC" (Oh, I see) or "BRB" (Be right back) to save time. (33), language has become simpler and faster for everyday use, especially in texting and social media.

- ✓ green / eco-friendly
- ✓ fast and comfortable
- ✓ has autopilot / runs on electricity
- ✓ avoid traffic jams
- ✓ carry many passengers
- ✓ a great way to travel in the future

OUTLINE

Introduction: I think people will like travelling by + [means of transport] in the future because...

Body:

- First: green → runs on electricity.
- Second: safe and comfortable → has modern features like autopilot.
- Third: convenient → carries many passengers → avoid traffic jams.

Conclusion: Though it may be expensive, its benefits make it a top choice for the future.

Writing sample:

I think people will like travelling by **skyTrans** in the future because it has many advantages.

First, it is green because it runs on electricity.

Second, it is safe and comfortable because it is modern with an autopilot function and has

its own tracks.

Third, it can carry a lot of passengers, so road users can avoid traffic jams.

Though some people might think it is expensive, these advantages will make it the means of transport in the future.
