Understanding Previous Weekly High and Low

In market structure analysis, assessing **PWH & PWL** is vital for identifying price volatility and critical price zones. These levels act as indicators of asset price behavior and **provide valuable** insights into **short-term trends** and market liquidity.

Previous Weekly High (PWH)

The **Previous Weekly High** represents the highest price an asset reached during the previous weekly period. In candlestick charts, this level is typically shown as the highest wick of the **weekly candle**.

Its importance lies in its potential to become a **dynamic resistance level**, as many **sell orders** and **buy side liquidity (BSL)** accumulate in this area.

Why Are PWH & PWL Important?

Using the **Previous Weekly High and Low** in market structure analysis and strategy development is essential for several reasons:

- ↳ **Measuring price volatility:** The distance between PWH and PWL indicates the weekly price range, which helps determine trade risk levels;

- ◆ **Key support and resistance levels:** These points often act as dynamic **resistance and support zones**, serving as optimal trade entry and exit points;
- ◆ **Liquidity analysis:** In **advanced trading strategies** such as **ICT style and Smart Money Concepts (SMC)**, these levels mark liquidity accumulation areas in **Forex** and other **financial markets**;
- ◆ **Identifying macro trends:** A **consistent increase** in PWH and PWL suggests an **uptrend**, while a **declining pattern** may signal a **downtrend** initiation.

Conclusion

The **Previous Weekly High and Low (PWH & PWL)** are key market reference points, providing insights into **liquidity zones, institutional order flow, and trend shifts**. Acting as dynamic support and resistance, these levels can be used to anticipate price reactions.

Utilizing PWH & PWL enables traders to **identify liquidity traps, spot false breakouts, and align with market sentiment**, enhancing risk management and trade execution.
