

1. Is this a polygon? Explain your answer.

- a. No, this is not a polygon because it is an open shape.
- b. Yes, it is a polygon because it have straight sides.
- c. No, this is not a polygon because it does not have straight sides.
- d. Yes, this is a polygon because it is a closed shape.

2. In what two ways can this triangle be classified?

- a. equilateral and acute
- b. right and scalene
- c. obtuse and isosceles
- d. right and isosceles

3. In what two ways can this triangle be classified?

- |                        |                      |
|------------------------|----------------------|
| a. acute and isosceles | c. right and obtuse  |
| b. obtuse and scalene  | d. acute and scalene |

4. Find the measurement of the missing angle in this triangle.

- a.  $40^\circ$
- b.  $220^\circ$
- c.  $100^\circ$
- d.  $160^\circ$

5. Find the measurement of the missing angle in this triangle.

- a.  $218^\circ$
- b.  $38^\circ$
- c.  $30^\circ$
- d.  $142^\circ$

6. Find the measurement of the missing angle in this triangle.

- a.  $140^\circ$
- b.  $39^\circ$
- c.  $141^\circ$
- d.  $321^\circ$

7. Find the measurement of the missing angle in this quadrilateral.

- a.  $261^\circ$
- b.  $100^\circ$
- c.  $81^\circ$
- d.  $99^\circ$

8. Find the measurement of the missing angle in this quadrilateral.

- a.  $130^\circ$
- b.  $50^\circ$
- c.  $230^\circ$
- d.  $140^\circ$

9. Classify the following triangles by sides or by angles.

a.

b.

10. Classify the following quadrilaterals.

a.

---

b.

---
