Read the article . Choose words to complete each answer.

REM SLEEP

What is REM sleep?

In 1953, scientists discovered a brain state called REM sleep. Scientists think that people dream during REM. REM stands for Rapid Eye Movement.

How often does REM sleep occur?

REM sleep takes place about every 90 minutes. During REM sleep, the eyes move very fast. The body is paralyzed during REM sleep and cannot move.

What is the evidence that REM sleep and dreams are linked?

About 70 to 95 percent of people who are awakened during REM sleep say that they were dreaming. Only 5 to 10 percent of people awakened during non-REM sleep had dreams. So REM seems closely linked to dreaming.

Is REM sleep the cause of dreams?

Scientists aren't sure about this. Right now, they think that REM sleep may start dreams. But the dreams can go on even when REM sleep ends.

A. What does REM stand for?

It stands for

Movement.

B. How often does REM sleep take place?

It takes place every 90

C. What happens to the body during REM sleep?

It cannot

D. What percent of people have dreams during REM sleep?

About

percent to 95 percent

E. What do scientists think that REM sleep does?

It

dreams.
