

A. Divide 25 balloons among 5 children :

$$(25) - (5) = (20) \rightarrow (1) \text{ time}$$

$$(20) - (5) = () \rightarrow () \text{ times}$$

$$() - (5) = () \rightarrow () \text{ times}$$

$$() - (5) = () \rightarrow () \text{ times}$$

$$() - (5) = () \rightarrow () \text{ times}$$

Therefore, $25 \div 5 = ()$

B. Divide 18 chocolates among 6 students :

$$(18) - (6) = (12) \rightarrow (1) \text{ time}$$

$$() - (6) = () \rightarrow () \text{ times}$$

$$() - (6) = () \rightarrow () \text{ times}$$

Therefore, $18 \div 6 = ()$
