8 Multiple choice questions

Definition 1 of 16

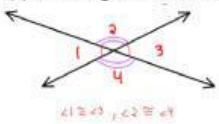

A triangle that has 2 equal sides.

- ◯ Right angle
- ◯ scalene triangle
- ◯ isosceles
- ◯ Triangle

Definition 2 of 16

opposite angles formed by the intersection of two lines

- ◯ Right angle
- ◯ Straight angle
- ◯ vertical angles
- ◯ adjacent angles

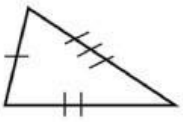

Definition 3 of 16

segments that have the same length

- ◯ cogruent segments
- ◯ congruent angles
- ◯ adjacent angles
- ◯ Straight angle

Definition 4 of 16

a triangle with no congruent sides

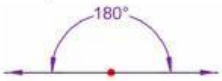

- ◯ congruent angles
- ◯ equilateral triangle
- ◯ Straight angle
- ◯ scalene triangle

LIVEWORKSHEETS

Definition 5 of 16

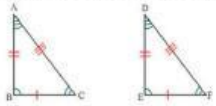

an angle that measures exactly 180 degrees

- Right angle
- Obtuse angle
- congruent angles
- Straight angle

Definition 6 of 16

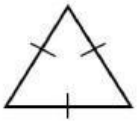

angles that have the same measure

- congruent angles
- adjacent angles
- cogruent segments
- Straight angle

Definition 7 of 16

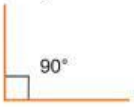

a triangle with 3 congruent sides

- scalene triangle
- equilateral triangle
- isosceles
- Straight angle

Definition 8 of 16

an angle that measure exactly 90 degrees

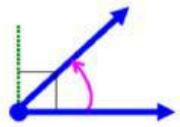

- acute angle
- Obtuse angle
- Right angle
- Straight angle

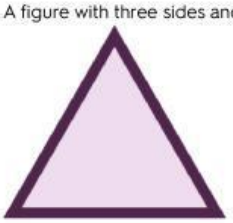

8 Matching questions

	an angle with a measure greater than zero degrees and less than 90 degrees	A. Point	9-16 of 16

LIVEWORKSHEETS

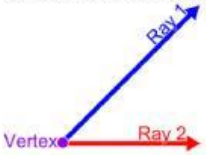

A figure with three sides and three angles

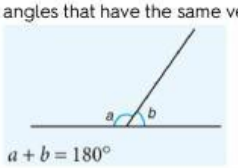

an exact location in space

The common end point of the rays forming the angle

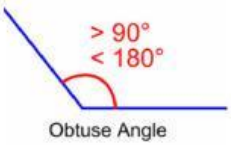

angles that have the same vertex, share a common side, and do not overlap

A part of a line, with one endpoint, that continues without end in one direction

any angle that measures greater than 90 degrees but less than 180 degrees

a part of a line that has two endpoints

B. line segment

C. acute angle

D. Triangle

E. adjacent angles

F. Vertex

G. Ray

H. Obtuse angle
