Watch the Suitcase Scooter in action. Search YouTube for "Rideable suitcase scooter invented in China".

TASK 5 Watch the video and answer the questions. [Click HERE.](#)

1. What makes the Suitcase Scooter move? _____
2. How long can it work with one charging? _____
3. How many advantages does the inventor mention?

4. How did the idea come to the inventor? _____
5. How many Chinese Yuans will it cost? _____

Have you seen any unusual products lately? *The Daily Mail* recently featured a selection of imaginative new inventions. Here are a few of them.

The Suitcase Scooter

The Suitcase Scooter is a suitcase that can be converted into an electric scooter. It has a speed of up to about 20 km/h, and it was designed by Chinese Inventor He Liangcai. The scooter includes a throttle, brakes, lights, a GPS, a horn and a theft alarm, and has enough power to travel up to a distance of about 60 kilometres.

The Air-Conditioned Cooling Jacket

The Kuchofuku Air-Conditioned Cooling Jacket comes with two small battery-powered fans which blow cool air around your body. Designed by Hiroshi Ichigaya of Japan, the jacket allows you to stay cool with two 10-cm fans which are built into the pockets of the jacket.

The Collapsible Boot

You never know when you might need a pair of sturdy boots. But the problem is they just take up so much luggage space. But not any longer. Lems Boulder Boots weigh about 300 grams and are the lightest boots in the world. Made of nylon and leather, they can be squashed down and easily stuffed into a bag.

The Ostrich Pillow

The Ostrich Pillow can completely isolate you from the outside world. It's perfect if you're waiting for a flight or commuting home from work as you can shut off all surrounding noise. The strange-looking pillow was designed by Key Portilla-Kawamura and Ali Ganjavian of Studio Banana.

The Mobile Cup Holder

Have you ever tried rushing to catch a plane or train with a cup of hot coffee in your hands? With the Mobile Cup Holder, you can move at great speed without spilling your drink. The drinks holder was invented by emergency room nurse Karen Porte. The device fits onto most roller luggage and holds the cup between the retractable handles.
