

Functions of the female reproductive system.

H. Fallopian tubes

Tissue around fallopian tubes.

I. Uterus

Y-shape that connects uterus and vagina.

J. Fimbriae

Connects ovary with the womb to carry the egg towards fertilization.

K. Ovary

Creates a blood wrap that is discarded if the egg isn't fertilized.

L. Endometrium

Tube that connects with the exterior, from which semen will penetrate to produce fertilization.

M. Cervix

Innermost lining layer of the uterus.

N. Vagina

Allows maturation of eggs and produces female hormones.
