

Main Idea & Supporting Details

Write the main idea on the top of the table and add supporting details on the legs. Make sure each detail clearly supports the big idea!

Birds That Hunt

An owl is a kind of bird that hunts for other animals to eat. It likes to hunt at night. Owls have big eyes to see well in the dark. Their wings' soft feathers help them fly quietly. An owl can turn its head almost all the way around to find animals. Their sharp claws help owls catch small animals.

Yellow rounded rectangle for the main idea.

Oceans

People enjoy the ocean for fun activities. They like to go there to see the beach. They like swimming in the water. Some people like sailing or fishing in the ocean. But the ocean isn't just enjoyable, it's also important to our Earth! It stops the Earth from getting too cold. When the sun shines on the ocean, the water takes in the heat. Then, that water flows around the world. Because this warmth gets spread around, more parts of Earth can have living things.
