

ORGANIZE

There are several reasons or factors why two people might perceive things differently. Read each example. Check (✓) the box that shows which factor is affecting perception for that example.

USE YOUR NOTES

Review your notes from Readings One and Two. Use the information in your notes to complete the chart.

Example	FACTORS THAT AFFECT OUR PERCEPTION				
	Light (context)	Memory and expectations	Anatomy	Surrounding color (context)	Attention
1. A little girl thinks her yellow macaroni and cheese is white.	✓				
2. A person has trouble seeing differences between blues and purples.					
3. We usually say that water is blue.					
4. A pale green dot looks gray on a bright green background and very green on a red background.					
5. People disagree about the color of the dress that nearly broke the Internet.					
6. We see faces or a vase in the faces / vase illusion.					
7. The stairways in Escher prints seem to only go up.					
8. People who focus on counting moving balls in a video do not notice when a gorilla walks through the scene.
