

CWT Prompt: Students complete the culminating task in this section. Students use their knowledge of the teenage brain to write a response to the following question: Does being a teenager positively or negatively affect one’s decision making? Be sure to address and refute at least one counterclaim in your response.

Facts about topic:

- A rewiring is happening in the brain, which causes an impact on behaviors that seem impulsive and irresponsible.
- Teen brains are different than adult brains.
- Teens weigh risk vs. reward differently.
- Reward circuitry is activated

Positive Side	Negative Side
