

TYPES OF ENERGY

There are two types of energy: renewable and non-renewable.

Non-renewable energy includes coal, gas and oil. Most cars, trains and planes use non-renewable energy. They are made by burning fossil fuels to create energy.

Renewable energy includes solar, hydro and wind energy. Wind energy is made when the wind moves the blades on a wind turbine. This movement creates wind energy which is converted into electrical energy.

Fill in the gaps using the words:
non-renewable - renewable - solar - coal

A

Energy that is generated from a source that can be reused is called energy.

B

Examples include wind, hydroelectric and power, which comes from the sun.

C

Energy that is generated from a source that cannot be reused is called energy.

D

Examples include , which is formed from dead plants, oil and natural gas.
