

Chameleons can turn their eyes in two different directions at the same time. This helps them to spot¹ their enemies and their food. They eat insects and are famous for their ability to camouflage. As a chameleon grows, its skin doesn't. When it gets tight, they lose² it. Their old skin is quite tasty so they often eat it. YUMMY! If you see a chameleon sleeping during the day, or with one or both eyes closed, then he is sick. They never sleep during the day.

¹ see ² drop

Crocodiles and sometimes jump to catch their food. When they see their food, they open their strong jaws and swallow it. The food goes straight down to their stomach. Crocodiles grow new teeth to replace their old ones all the time but they never clean their teeth. And they don't move their tongues!

Seahorses or 'hippocampus' can change colour to match themselves from their enemies. Male seahorses are the only males on the planet that have a brood pouch. The female lays eggs in the male's brood pouch. The male carries them for a month and then there they are: A THOUSAND TINY BABIES!! Seahorses have one partner during their lifetime. Each morning the couples dance together. Their dance usually lasts for several minutes.
