

Kangaroos

Even though kangaroos might look a **little** strange, they are pretty cool animals. Kangaroos don't walk, they jump everywhere **(1)** their bodies are designed for jumping. They **(2)** short front legs, strong back legs and big feet. All of **(3)** help them to jump around and their strong tails help them to balance. When kangaroos jump, their legs move together. They are also able to kick each leg out separately **(4)** they go swimming. Kangaroos eat grass and leaves so they need **(5)** little water to survive. An adult kangaroo is capable of going for months without drinking anything at all. Do you like kangaroos?
