

compressional	bounces	wavelength	wavelength	normal
cannot	crest	rarefaction	transverse	amplitude
compression	trough	combination	EQUAL	INCIDENCE
REFLECTION	angle of reflection	angle of incidence		

Drag and Drop each term to the correct location

Identify and label each wave.

Reflection: Happens with a waves hits a surface that it 11. _____ pass through and 12. _____ off of it. The Law of Reflection states that the ANGLE of 13. _____ (Formed by the incoming ray and the normal) is 14. _____ to the ANGLE of 15. _____ (formed by the outgoing ray and the normal).

Label

crests	crests	interfere	bend	bend
troughs	troughs	hole	natural frequency	barrier
add	can	absorb energy	medium	barrier
subtract				

Drag and Drop each term to the correct location

Picture 21.

Refraction: Waves 19. _____ as they move from one 20. _____ to another.

Picture 23.

Diffraction: Waves 22. _____ around a barrier that they cannot pass through. They can either go through a 24. _____ or around a big barrier. _____

Picture 25.

Interference: Happens when waves 26. _____ with each other because they overlap.

Picture 27.

Positive interference happens when waves 28. _____ together, because the crests align with 29. _____ and the 30. _____ align with troughs.

Picture 31.

Negative interference happens when waves 32. _____ from each other, because the crests align with 33. _____ and troughs align with 34. _____

Resonance: Is the ability of a material to 35. _____ at its own 36. _____
