Read the paragraph carefully.

According to Ahmad (2025), the impact of Artificial Intelligence (AI) on our human rights is complicated, with both positive and negative sides that we must consider carefully. On one hand, if we combine AI with our skills, we can achieve incredible progress and do things much faster. However, it is essential to protect what makes us special as humans: our creativity and our ability to make important decisions. The solution is to find a balance between developing new technology and ensuring it is ethical and safe for everyone. To build a future where AI truly helps humanity, we need teamwork between countries, responsibility from tech companies, and clear rules that always put the well-being and rights of people first.

Read the seven sentences below. They are mixed up. Put them in the correct order to create a paraphrased paragraph that makes sense.

() Ahmad (2025) states that AI's influence on our rights is complicated, with both good and bad possibilities.

() For example, using AI can help us achieve amazing things and make progress much faster.

() To build a better future with AI, countries and tech companies must work together.

() They must create clear rules that always put people's rights and safety first.

() At the same time, it is vital that we protect our special human qualities.

() These qualities include our creativity and our freedom to make our own decisions.

() Therefore, finding the right balance between new technology and our safety is the main goal.

Read the paragraph carefully.

Many people still have strong, unfair ideas about mental health, and this is a big problem that is still common today. These negative beliefs make it much harder for people with mental health conditions to make friends, do well in school, or get a good job. This way of thinking is so common that it can even affect how important people, like judges and leaders, make decisions. To help fix this, the United Nations created a special rule to protect the rights of all people with disabilities. This rule says that everyone must be treated fairly by the law and that it is wrong to force people or make decisions for them. Instead, we should help people make their own choices by giving them the support they need and listening to what they want. This rule tells countries that they must stop these unfair practices and respect everyone's decisions (Mahdanian et al., 2022).

Read the seven sentences below. They are mixed up. Put them in the correct order to create a paraphrased paragraph that makes sense.

- () A big problem today is that many people still have unfair beliefs about mental health.
- () Because of these negative ideas, it can be hard for them to find friends, succeed in school, or get jobs.
- () This unfair thinking can even change the way leaders and judges make important choices.
- () To solve this, the United Nations made a special agreement to protect the rights of people with disabilities.
- () This agreement says it's wrong to force people or decide for them, and everyone must be treated equally by the law.
- () It tells governments that they have a duty to end these unfair actions and respect everyone's personal decisions.
- () Instead, we should give people the help they need to make their own choices based on what they want.

Read the paragraph carefully.

In Peru, waste from mines, factories, and cities is making rivers and lakes dirty with harmful things called heavy metals, like lead and mercury. Fish absorb these metals from the water, and the metals build up inside their bodies over time, which can make them dangerous for people to eat. Scientists studied fish all over the country and found that many had high levels of these dangerous metals. For example, fish in the Amazon jungle, rainbow trout in the Andes mountains, and even fish from the coast had unsafe amounts of mercury and lead. This shows why it's very important to keep checking the water and the fish to protect everyone's health and keep the animals safe (Mamani et al., 2025).

Read the seven sentences below. They are mixed up. Put them in the correct order to create a paraphrased paragraph that makes sense

- () Dangerous metals from things like mines and factories are getting into Peru's rivers and lakes.
- () Fish living in this polluted water take these metals into their bodies.
- () A study of fish across the country showed that many were contaminated.
- () For instance, unsafe fish were found in the mountains, the Amazon jungle, and on the coast.
- () When people eat these fish, it can be very harmful to their health.
- () This is why it is so important to keep testing the water and the fish.
- () Doing this helps protect the health of people and the safety of the animals.
