

J4- Science Exam

Mr/ Emad Diab

Choose the correct answer:

During inhalation, the diaphragm and the chest size

..... plays an important role in inhalation and exhalation processes.

Fish have to breathe underwater.

Both of humans and fish

The in gills carry oxygen to the rest of the body of a fish.

Put (true) or (false):

Fish breathe oxygen gas which is dissolved in water

During exhalation, the diaphragm moves upward and relaxes.

Carbon dioxide gas is important for the respiration of animals.

Exhaled air is loaded with oxygen.

The lungs are one of the important organs in the respiratory system
