

Today, many students practice their reading skills using technology. Digital tools such as e-books, websites, and educational apps make reading more accessible and interactive. With these tools, learners can highlight new words, check their meaning instantly, or listen to audio versions of the text. Technology also provides a wide range of reading materials, from news articles to short stories, allowing students to choose topics that interest them.

Another advantage is that online platforms often include quizzes and questions that help students check their understanding. This makes reading more active and helps learners develop stronger comprehension skills. Overall, technology encourages students to read more, understand better, and feel more confident in their ability to learn.
