

Title: The Benefits of Learning with Technology

The role of technology in education has increased significantly in recent years. Today, students have access to a wide range of digital tools that help them improve their learning experience. Online videos, interactive worksheets, and virtual platforms allow learners to practice at their own pace, explore additional resources, and receive instant feedback. By combining visuals, audio, and hands-on activities, technology transforms traditional lessons into interactive and engaging experiences. Furthermore, technology encourages the development of essential 21st-century skills. Through digital learning, students strengthen abilities such as digital literacy, critical thinking, communication, and problem-solving. These competencies are becoming increasingly important in modern academic and professional environments, where the ability to adapt and use technological tools is considered a key advantage.

Despite its benefits, technology is not meant to replace teachers. Instead, it serves as a valuable complement that helps clarify challenging topics and supports students in building confidence and autonomy. When used responsibly, technology becomes a powerful educational ally that enhances motivation, promotes independent learning, and improves overall performance in the classroom.

In conclusion, technology offers meaningful opportunities for personalized learning, allowing students to progress according to their needs while gaining important digital skills. However, its effectiveness depends on how it is integrated into the learning process and the willingness of students to use it responsibly and actively.

MULTIPLE CHOICE

1. According to the text, how does technology make lessons more interactive?

- a) By limiting the number of activities
- b) By combining visuals, audio, and practical tasks
- c) By removing the need for teacher explanations
- d) By focusing only on reading activities

2. Which set of skills is mentioned as important in the modern world?

- a) Memorization and repetition
- b) Digital literacy, communication, and problem-solving
- c) Only artistic skills
- d) Note-taking skills

3. What does the text suggest about the role of teachers?

- a) Teachers are no longer necessary
- b) Technology makes teachers less effective
- c) Technology complements teachers but does not replace them
- d) Students learn better without guidance

4. What is the main purpose of the conclusion paragraph?

- a) To list problems caused by technology
- b) To highlight the risks of using technology
- c) To summarize the benefits and conditions for effective use
- d) To argue against digital learning

TRUE / FALSE STATEMENTS

5. Technology allows students to move through activities at their own pace. ()
6. The text claims that using technology guarantees academic success for all students. ()
7. According to the passage, digital tools help develop important 21st-century skills. ()

MATCHING

A. Critical thinking

Online spaces where learning tools and activities are organized.

B. Autonomy

The ability to work independently and make responsible decisions.

C. Virtual platforms

The skill of analyzing information carefully before forming a judgment.
