Solving the Plastic Problem

Scientists have been working hard to solve the plastic problem. The first invention is a special plastic that can break down quickly when it touches water. Unlike regular plastic, this

special plastic doesn't leave harmful microplastic behind. Some people agree that this is a great solution because it helps keep the oceans clean. Others disagree because it might be too expensive.

The second solution is a device that collects plastic floating in the ocean. The device is plain but very clever. It uses sticky tack to collect small pieces of plastic that are hard to see. I agree this idea is helpful because it helps animals that eat plastic by mistake. Both solutions are helpful in solving the plastic problem. Together, these ideas can make a big difference.
