c. They wanted a funny name for their company and they called it Yahoo!

d. They wanted a funny name for their company, so they called it Yahoo! 285

True/False

Indicate whether the statement is true or false.

PART 3: READING

Corn Flakes

Will Kellogg was born in 1860. He had no idea that one day he would change the way we eat breakfast.

Will had little education compared to his older brother John Kellogg. John was the chief doctor at the Battle Creek Health Center in Michigan, where people went to eat healthy food and recover their health. Will worked at his brother's health center. He was the accountant and manager, and he did everything else his brother didn't want to do. He also helped John look for new healthy foods for his patients.

Will tried to make healthy bread from wheat. One day, he put grains of wheat through some rollers. Each grain came out as a thin, flat flake. When he baked the flakes in the oven to get them dry, they became light brown in color. In this way, he produced wheat flakes. He served the new food in the dining room of the health center for breakfast. The patients ate the new breakfast food and loved it. It was 1894, and a new cereal was born.

Even after the patients left the health center, they continued to order bags of the cereal. By 1895, John and Will were producing 100,000 pounds (45,359 kilograms) of flakes every year and selling each ten-ounce box (283 grams) for fifteen cents. John was not interested in this new food business and left all the work to his brother. For the next few years, Will continued to experiment with new foods. He came out with a new cereal made from corn—he called it Corn Flakes!

The two brothers started to argue about the future of their cereal. Will wanted to start a cereal

company; his brother did not. This argument turned brother against brother, and they stopped working together. In 1906, Will opened his own cereal company, called the Toasted Corn Flake Company, and started to sell Corn Flakes. By 1907, his company was producing 2,900 cases of cereal every day. By 1948, the Kellogg Company had sales of more than \$100 million. The company had become the world's largest producer of ready-to-eat cereal. Will continued to work in the company until he died in 1951 at the age of 91.

Instructions: Refer to the reading "Corn Flakes." For each statement, answer *True* or *False*.

1. John Kellogg was born before 1860.
2. The Kellogg brothers worked together in a health center. Will was a doctor there, and John was the manager.
3. Will Kellogg was better educated than his brother.
4. Will created his first new type of breakfast food by rolling, baking, and drying corn. 286
5. A year after producing their first breakfast food, the brothers were producing 100,000 pounds of the flakes.
6. While John continued to work as a doctor at the Battle Creek Health Center, Will continued to try to create new types of breakfast cereal.
7. John helped Will create the cereal company – The Toasted Corn Flake Company.
8. John and Will never worked together at the Kellogg Company.
9. When Will died, he was still working at the Kellogg Company.
10. The Kellogg Company only became successful after Will died.
