

The diagram below shows the recycling process of plastics.

*landfill sites /essentially /Given/ into /plastic recycling/ ending with / entering /
thrown away/ discarding / Once /beginning with/ processed /loaded / thereby /for
/In the first stage/ finally /along with/ where/*

The (1)diagram illustrates the process of

(2).....

Overall, there are (3)six stages in the plastic recycling
process, (4)the buying, using and (5)of
new plastic products and (6)newly recycled products (7)
.....the market again.

(8), new products displayed in shops are purchased, used
and(9) Plastic bags, (10)other garbage,
are sent and buried in (11) Plastic bottles and containers
however, are collected (12)recycling. After being gathered,
the plastic bottles are then taken to sorting houses (13)they
are divided (14)different categories.

(15.....)the plastic has been sorted, it is then (16)
onto trucks and transported to factories where it is (17)
and made into new plastic products. These new, recycled
 plastic products are then (18)distributed back to retail shops
 where they are sold, reused and discarded once again, (19)
continuing the process.
