

## O Ciclo da Gotinha

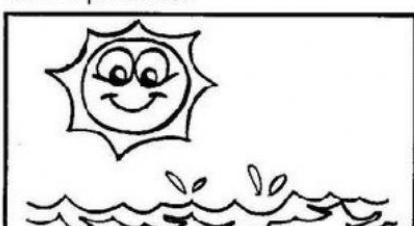

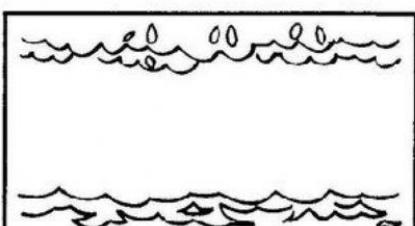

♦ Leia e numere de 1 a 6 a história da gotinha d'água:

De tão pesadas que ficam, elas caem para molhar a terra.

E ela sobe para as nuvens.

Lá no alto, num lugar muito frio ela se encontra com milhares de gotinhas.

E com o calor do sol a gotinha e suas companheiras evaporam-se novamente.

Ligue as quantidades de gotinhas corretamente
