

Comparing Metals, Non-metals, and Metalloids

Below each line, type the terms metal, non-metal, and metalloid at the spot that matches the characteristic. (For example, below the Luster diagram, place the term metal under "Highly lustrous," since metals tend to be very shiny. Then, place the terms non-metal and metalloid in the proper spots. Repeat for the Conductivity and Malleability diagrams.)

Little or no luster**Luster****Highly lustrous**
