

Electrical Components

Fill in the table with the necessary electrical components, their symbols, names and functions.

Electrical Components	Symbols	Name	Function
Switch Converts electricity into light energy.			
Resistor Converts electrical energy into movement.			
Motor Converts electricity into sound.			
protects a system or equipment from overload and short-circuit faults by cutting off the power to them.			
Wire Connects or breaks an electric circuit			
Buzzer Provides flow of electric current.			
Inductor Provides voltage to power circuits.			
Fuse limits or regulates the flow of electrical current in an electronic circuit			
Battery store energy in the form of magnetic energy when electric current flows through it.			
Light Bulb
