Springtime

READING COMPREHENSION ACTIVITY

Spring is the season between winter and summer. During this time, the weather becomes warmer, and days grow longer. Trees begin to grow new leaves, and many plants produce colorful flowers. Animals also become more active after the cold winter months. Birds return from warmer places and build nests to lay their eggs. However, spring weather can be unpredictable. Some days are sunny and warm, while others are cold and rainy. In many places, people enjoy spending more time outdoors, going for walks, having picnics, or working in their gardens.

A. Read the text about Springtime and decide whether the sentences are true or false.

1.	Spring comes after summer.	True	False
