SCIENCE ROBOTS

1. A few true robot is any machine that can move about and do different jobs
2. without human help. The word 'robot' was originally used to describe much
3. factory workers, and that is been just what the majority of actual robots
4. are. However, robots are work without having a rest. This makes them good
5. at doing so boring or dangerous jobs. Although they have not yet replaced
6. human workers, lots robots have made factories much more efficient.
7. Children are often keen on robot toys. One others robot called Aibo can sleep
8. and play. It has first went on sale in 1999 in Japan. Since then it has become
9. cheaper to buy and more reliable. The most latest models can do a large
10. number of different things. They can to even recognise their owner's face.
