

In 2000, Asimo, a robot created by Honda, amazed everyone by just walking down the stairs. Twenty years later, a robot named Sophia can even communicate with people by using human language and expressing emotions.

However, robots are just one example of Artificial Intelligence (AI) – the study and development of machines that can copy human intelligence.

Nowadays, AI has been applied to various areas of life.

At home, devices such as vacuum cleaners can now use AI to measure the room size and recognise any furniture. They can then decide on the most effective way to clean the house.

In transport, AI can be used on many smartphones to collect information about traffic. This can then help drivers find the most suitable route.

Travelling has become much more convenient thanks to AI.

At work, the uses of AI are even more useful and exciting. Computer programmes, such as AI software or chatbots, can help customers plan their holidays, book flights and hotels, and answer questions.

AI is one of the most important inventions of the 21st century. It has completely changed our daily work and life.

1. Choose the best title for the text:

- A. AI development over time
- B. Robots: The best AI inventions
- C. AI in use today
- D. AI in education

2. Decide if these statements are True or False:

	True	False
1. Sophia can show emotions when talking to humans.	<input type="checkbox"/>	<input type="checkbox"/>
2. AI helps to make machines that think and act like humans.	<input type="checkbox"/>	<input type="checkbox"/>
3. AI is one of the most important inventions of the 20th century.	<input type="checkbox"/>	<input type="checkbox"/>
