Taiwan and Its Technological Importance

Taiwan is a small island in East Asia, but it is very important in the world of technology. About 23 million people live there. Even though Taiwan is not a big country, it plays a very big role in making electronic products.

Taiwan is famous for producing computer chips, also called semiconductors. These tiny chips are used in many things, such as phones, computers, cars, tablets, and medical machines. One of the most famous companies in Taiwan is TSMC, which was founded in 1987. It is one of the world's leading chip manufacturers.

Taiwan's technology industry is very strong. It exports many electronic products to countries around the world. In 2024, Taiwan continued to be one of the most important places for advanced chip production. Many global companies depend on Taiwanese factories.

Technology is important because modern life depends on it. Without chips, many machines cannot work. That is why Taiwan is important not only for Asia, but for the whole world. Its success in technology affects business, transportation, communication, and even health care.

Scanning Questions

1. How many people live in Taiwan?	
2. What are computer chips also called?	
3. Name two products that use chips.	
4. What is the name of the famous Taiwanese chip company?	
5. In what year was TSMC founded?	
6. In which year did Taiwan continue to be very important for advanced chip production?
