Scrum vs Kanban – What's the difference?

Listen to the video below and complete the exercises

https://www.youtube.com/watch?v=rIaz-l1Kf8w

Exercise 1

Choose the correct answer:

1. What is the primary goal of the "Product Owner" in Agile development?
   a) To write the source code for every feature.
   b) To organize input into a prioritized list called the "Product Backlog".
   c) To manage the daily schedule of the developers.
2. According to the video, what makes software development "Agile"?
   a) Working as fast as possible without breaks.
   b) Delivering value in small increments and gathering constant feedback.
   c) Following a strict plan created at the beginning of the year.
3. Why are both Scrum and Kanban considered "Pull Systems"?
   a) Because they pull the team to work 24/7.
   b) Because work is pulled from the backlog only when there is capacity.
   c) Because customers pull the product out of the store.
4. What happens to the "Product Backlog" during the project?
   a) It remains exactly the same from the first day until the end.
   b) It is a living list that is constantly reprioritized based on stakeholder feedback.
   c) It is deleted once the first Sprint begins to avoid distractions.

Exercise 2

Fill in the blanks with the following words: Continuous - Limits - Signals - Capacity

1. Kanban does not use Sprints; it is a _____ process.
2. The pull system in Kanban is managed through Work In Progress (WIP) _____.
3. Each column on a Kanban board relates to the team's _____.
4. When a ticket moves to the "Done" column, it _____ the previous column to send a new one.

Exercise 3

Decide if the following statements are True (T) or False (F)

1. Scrum teams work in fixed periods called "Sprints", usually lasting two weeks.
2. New requirements that appear during a Sprint are usually added immediately to the current work.
3. The "Sprint Review" is a demonstration of new functionality to the stakeholders.
4. Incomplete items at the end of a Sprint are returned to the Product Backlog.

Exercise 4

Finish the following sentences with the literal words from the video.

1 In Scrum, the person who helps the team maintain good habits is called the *Scrum Master*, whereas in Kanban this role is known as the.....

2 A "Sprint Retrospective" is an important ritual because the team examines.....

3 Kanban uses WIP limits to ensure that work moves from the backlog to the customer in the.....

4 High-performing teams are not always 100% prescriptive; instead, they discover what works for them and.....
