MYTHBUSTERS

MythBusters is a science entertainment TV programme. Its aim is to prove that certain opinions are 1 rational, as well as to show how people often accept things that are untrue or 2 interpret the information they are given. The 'mythbusting' team finds out if various opinions are true or not through experiments. Most of them are conducted in a workshop. However, it's often 3 practical for them to work inside because of the space needed so some experiments are conducted outdoors. The myths are either 'confirmed' or 'busted', and when busted, the truth will often leave you 4 speech. Sometimes, however, neither of the two can be done. The team's 5 inability to work out what is really going on is only due to the fact that there is 6 adequate evidence. These myths are named 'plausible'. Many of the experiments are very dangerous and the team is quick to 7 courage viewers from copying them. There are some 8 forgettable episodes, like when the team was trying to build a rocket car. *MythBusters* is more than just a bit of fun and points out how we are often 9 misinformed about different facts and must use science to find out the truth.
