

Match the appropriate answer.

Diameter

☐☐

The angle created by two radii, with the vertex positioned precisely at the center of the circle, is defined as such.

Apothem

☐☐

An angle formed by two chords with its vertex located on the arc of a circle.

Section

☐☐

A straight line that connects two points on a circle while passing through the center.

Radius

☐☐

A line that extends from the center point to a point on the circumference of a circle.

Segment

☐☐

The shortest line that connects the center point to the chord, which is always perpendicular to the chord.

Arc

☐☐

The area within a circle enclosed by two radii and one arc. (Its form resembles a slice of pizza).

Chord

☐☐

The area within a circle enclosed by a chord and its corresponding arc.

Central Point

☐☐

A straight line that links two points on a circle without intersecting the center point.

Central angle

☐☐

A curved line that forms a segment of the circumference of a circle.

Circumferential
Angle

☐☐

The center point is the exact location at the midpoint of the circle.
