1. Read the following text and choose the correct option.

 Mercury Mercury, the smallest planet in our solar system and the closest to the Sun, is only slightly larger than Earth's Moon. On Mercury, the Sun seems much bigger than on Earth, and the sunlight is a lot brighter—up to seven times stronger.	 Saturn Saturn, often called the most beautiful planet in the solar system, is the second-largest planet and is known for its beautiful and prominent ring system. Saturn is a gas giant primarily composed of hydrogen and helium. Its rings are made up of countless particles of ice and dust, creating a breathtaking sight when viewed.
