

IS TIKTOK DANGEROUS?

TikTok is a popular app where people watch and share short videos. Many people use it every day. But is it dangerous?

There are some **risks**.

1. First, **you can spend too much time on TikTok**. Some people watch videos for hours and forget about their homework or other important things.
2. Second, **not all content on TikTok is good**. You might see videos that are not safe or not right for children.
3. Third, when you use TikTok, you share information about yourself. If your profile is public, anyone can see your videos and send you messages. This can be dangerous because **you might talk to strangers**.

But TikTok is not dangerous for everyone. If you use it carefully, it can be fun. Here are some **tips** to stay safe:

1. Set your profile to **private**. Then only your friends can see your videos.
2. **Don't share personal information** like your address or phone number.
3. **Limit your screen time**. Decide how many minutes or hours you can use the app each day.
4. **Talk to your parents** about any problems.

Is TikTok safe?

Do you use TikTok?
