

How to Grow Bean Sprouts

Read the instructions and reorder the pictures.

1. First, wash the green beans and soak them in water for 6–8 hours.
2. Next, put wet tissue paper at the bottom of a plastic glass.
3. Then, add the soaked beans and cover them with wet tissue paper.
4. After that, put the glass in a dark place and water it every day for 2–3 days.
5. Finally, harvest the bean sprouts and cook them for food.

Five large, empty rectangular boxes for reordering the pictures.
