### THE HISTORY OF TEA: FROM CHINESE RITUAL TO GLOBAL OBSESSION

[1] Tea is the most widely consumed beverage on Earth after water, with an estimated three billion cups drunk every day. Yet its origins are surprisingly ancient and deeply intertwined with Chinese culture. According to legend, the emperor Shennong discovered tea in 2737 BCE when dried leaves from a wild tree fell into his boiling water. Whether or not this story is true, historians agree that the deliberate cultivation and consumption of tea as a beverage was well established in China by at least the 3rd century CE.

[2] In China, tea was initially valued not for pleasure but for its medicinal properties. Early texts describe it as a remedy for fatigue, poor digestion, and low spirits. Over time, however, it evolved into a sophisticated cultural practice. During the Tang Dynasty (618–907 CE), the scholar Lu Yu composed the *Cha Jing*, or *Classic of Tea* — a comprehensive treatise on the cultivation, preparation, and appreciation of tea that elevated the beverage to the status of an art form. The Japanese tea ceremony, or *chanoyu*, which developed several centuries later, was similarly guided by principles of mindfulness, harmony, and aesthetic refinement.

[3] Tea reached Europe through Portuguese and Dutch traders in the early 17th century and became fashionable among the aristocracy almost immediately. In England, it was initially a luxury item, sold in coffee houses for prices that placed it well beyond the reach of ordinary people. The situation changed dramatically during the 18th century as the British East India Company established control over trade routes and began importing tea in enormous quantities. By the 1750s, tea had become the national drink of Britain, consumed across all social classes.

[4] The global spread of tea was not without its darker consequences. Britain's insatiable demand for Chinese tea created a significant trade imbalance, as China had little interest in British goods. To remedy this, the East India Company began smuggling opium — grown in British-controlled India — into China, leading to the Opium Wars of the 19th century, which left China weakened and humiliated. Meanwhile, the British established vast tea plantations in India and Ceylon (modern-day Sri Lanka), relying on exploited local labour to fuel their growing empire.

[5] Today, tea is produced in over 60 countries and traded on global commodity markets. It comes in hundreds of varieties — from the delicate white teas of Fujian province to the robust Assam blends favoured by builders in Britain. Beyond its cultural significance, tea has attracted growing scientific attention: studies suggest that regular consumption of green tea in particular may reduce the risk of cardiovascular disease and certain cancers. The humble leaf, it seems, has lost none of its power to captivate and sustain the human race.
