1. READING COMPREHENSION

Read the text carefully and complete the activities.

Dr. Emily Carter is an internal medicine physician at Mayo Clinic in the United States. She works in different areas of the hospital depending on the needs of the patients and the weekly schedule. Her job is demanding, but she enjoys the variety and teamwork involved in hospital medicine.

On Mondays and Tuesdays, Dr. Carter usually works in the Emergency Department, where she evaluates patients with urgent medical conditions. She often treats people with respiratory infections, chest pain, or injuries from accidents. The environment is fast-paced, and doctors must make quick decisions.

During the rest of the week, she rotates through other departments such as the Intensive Care Unit, the Radiology Department, and the Outpatient Clinic. In the ICU, she monitors critically ill patients and works closely with nurses and specialists. In Radiology, she reviews imaging results with radiologists to confirm diagnoses. At the Outpatient Clinic, she sees patients for routine check-ups and follow-up appointments.

Dr. Carter says communication is one of the most important skills in medicine. She must explain treatments clearly, listen carefully to patients, and collaborate with healthcare professionals from many departments. Although hospital work can be stressful, she believes helping patients recover is extremely rewarding.

A. VOCABULARY:Match the words from the text with their meanings.
