

Reading Homework

1. Read the text and complete the table.

Amazing Animals

Animals come in many different sizes, and some are really impressive because of their weight, height, and lifespan.

The lion is a strong wild animal that lives in Africa. It weighs between 150 and 250 kg. It is about 1.2 meters tall and can grow from 2 to 3 meters long. Lions are known as “the king of the jungle.” In the wild, they usually live between 10 and 14 years.

The polar bear lives in very cold regions like the Arctic. It has thick fur to protect it from the cold. A polar bear weighs between 350 and 700 kg. It is about 1.5 meters tall and can be 2 to 3 meters long. These animals are excellent swimmers and can live around 20 to 25 years.

The horse is a domestic animal that people use for transportation and work. Horses are strong and fast. They weigh between 380 and 1,000 kg. Their height is about 1.4 to 1.8 meters, and they can be 2.4 to 3 meters long. Horses usually live between 25 and 30 years.

2. Complete the table

Animal	Weight	Height	Length	Lifespan
Lion				
Polar Bear				
Horse				

3) Answer the questions according to the text.

Where does the lion live?

a) Arctic

b) Africa

c) Asia

Why can polar bears live in cold places?

a) Because they run fast

b) Because they have thick fur and fat

c) Because they are small

What are horses used for?

a) Only for food

b) Transportation and work

c) Swimming

Which animal lives the longest?

a) Lion

b) Polar bear

c) Horse
