Part C : Complete the Passage

Words: vaccination / livestock / breeding / sanitation / feed

Modern animal farms require good management practices. Farmers must provide high-quality _____ and clean water for all animals. Proper _____ is important to keep the farm free from disease. Many farms also use _____ programs to protect animals from infections. In addition, selective _____ helps improve animal quality and productivity. Today, _____ farming plays an important role in agriculture and food production.

Part D : Reading Comprehension

“Smart Animal Farming”

Smart animal farming combines technology and farm management to improve productivity and animal welfare. Farmers use automatic feeding systems, temperature control, and health-monitoring devices to care for livestock efficiently.

On many modern farms, workers record animal information using mobile applications and online databases. Farmers also use translation apps and digital dictionaries to communicate with international visitors and learn agricultural vocabulary in English.

Good sanitation, vaccination programs, and proper nutrition are essential for maintaining healthy animals and reducing disease outbreaks.

Answer the Questions

What technologies are used in smart animal farming?

Why do farmers use mobile applications?

What tools help students and farmers learn English vocabulary?

Why are sanitation and vaccination important?

What is the main idea of the passage?

Part E : Complete the conversation with the words below.

livestock / sanitation / veterinarian / poultry / productivity
