

Parts of a Computer

Cut and paste the correct names above the images and paste the descriptions next to the parts of a computer.

			
			
			
			
			
			
			

Keyboard	Printer	Monitor	Scanner
Mouse	Mouse Mat	Speakers	CD-Rom Drive
Compact Disc	Network Point	Interactive Whiteboard	Wireless Internet Connector
Data Projector	Central Processing Unit (C.P.U)		

This is the processor and the main part of the computer. All parts of the computer connect to this in order to to communicate and work.	Used for navigating and clicking on the computer screen. Single and double clicks are used for different functions.	A machine that copies things on paper or in books and then turns them into information that is understood by the computer.	This is the part of the computer that reads the information stored on the CDs we insert into it. Examples: music, games and programs.
This is where we plug computers into our network. This makes sure that they are all connected.	A machine that copies the information from your computer onto paper.	This is the machine used to project what is on the computer screen onto the whiteboard.	Used for entering information into the computer. This object contains many letters, numbers and symbols.
These connect to the computer to make it possible for us to hear the sounds it makes.	This is also called an IWB. This projector transfers what is on a computer screen on the board. It can be controlled using a digital pen.	The pad that the mouse sits on; it is used to make the motion of the mouse smoother and keep it from getting dirty.	
This part looks like a TV screen and shows you what you are doing on your computer.	This object can hold lots of information. It can hold programs, music and work that you have done.	This sends out signals to connect computers to the network without using a wire or network point.
