I ***Read the following text and circle the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the following questions.***

A recent study asked 2,000 children aged 6 to 14 about their dream jobs. The most popular choice was to become a YouTuber, with almost 20% of children choosing this role. Other popular jobs included being a teacher (15%), a sportsperson (14%), and a game designer (13%).

The study, conducted by KidZania London, a realistic role-play city for kids, also found that many children are worried about their future. Three out of five children are concerned about whether they will be able to get a job when they grow up.

Older children, aged 11 to 14, are especially focused on getting a well-paying job. Half of them want a job that will allow them to live a nice life. Other important factors include having a job that matches their hobbies (36%) and helping others (30%).

Surprisingly, only a small percentage of children (2%) wanted jobs like Prime Minister, banker, or care worker. While many children dream of being YouTubers, only 5% think this job will make the world a better place. Instead, they believe that doctors (35%) and scientists (23%) are the most likely to bring positive changes to society.

Many children understand the importance of further education. About 67% of those aged 11 to 14 are considering going to university or college because they believe their dream jobs will require it.
