

Topic 33. Enzymes and molecular mechanisms of translation. Antibiotics - inhibitors of transcription and translation.

Theoretical questions:

1. Recognition and activation of amino acids, formation of aminoacyl-tRNA. Characteristics of aminoacyl-tRNA synthetases (ARS-ase). An adapter function of tRNA.
2. Stages of translation:
 - initiation (sites of translation, protein factors, the energy supply)
 - elongation (peptide bond formation, translocation, the role of protein factors, the energy supply).
 - termination (site of termination, protein factors, energy supply).
3. Post-translational modifications of proteins. Examples.
4. Antibiotics - inhibitors of transcription and translation in prokaryotes and eukaryotes, their biomedical usage.
5. Effects of toxins on the processes of matrix synthesis.
6. Interferons: mechanism of action and biomedical applications.

Study Questions and Tasks

1. Recognition and activation of amino acids, formation of aminoacyl-tRNA.

2. Stages of translation:

Initiation

Elongation

Termination

3. Post-translational modifications of proteins. Examples.

4. Antibiotics - inhibitors of translation in prokaryotes and eukaryotes, their biomedical usage.

N	Antibiotics - inhibitors of translation	Mechanism of action and biomedical usage
1	Streptomycin	
2	Tetracycline	
3	Erythromycin	
4	Puromycin	

5. Effects of toxins on the processes of matrix synthesis.

N	Toxins	Mechanism of action
1	α- amanitin	
2	Ricin	
3	diphtheria toxin	

6. Interferons: mechanism of action and biomedical applications.
