

What is pollution?

Pollution is a serious problem that affects everyone. Scientists say, "**We must protect the environment,**" and they remind us **that** small actions can make a big difference.

People throw garbage into rivers, and factories release smoke into the air, so the environment becomes dirty. **If** we recycle and reduce waste, we will help our planet. **Whether** people decide to change their habits depends on their responsibility.

We should act **carefully**, protect nature **everywhere**, and work **very** hard to create a cleaner future. The city **where** many people live needs better recycling programs, and the students **whose** ideas inspire others can help make a positive change.

True or false

- ____ Pollution is a serious problem that affects everyone.
- ____ Scientists say that protecting the environment is not important.
- ____ If people recycle and reduce waste, they can help the planet.
- ____ The environment becomes cleaner because factories release smoke into the air.
- ____ Students whose ideas inspire others can help make a positive change.
