ECO WARRIORS

Protecting Our Planet

PROTECTING OUR PLANET

Plastic pollution is one of the most critical environmental challenges facing our world today. Every year, millions of tons of plastic waste end up in our oceans, harming marine life and disrupting delicate ecosystems. Simple human actions, such as using single-use plastic bottles, synthetic bags, and plastic straws, contribute heavily to this global problem.

Fortunately, individuals can take meaningful action to combat climate change and reduce waste. By adopting the principles of the "3 Rs"—Reduce, Reuse, and Recycle—we can minimize our ecological footprint. Transitioning to reusable water bottles, using cloth bags for shopping, and properly sorting recyclable materials in our homes are effective habits. Protecting the environment requires collective action, and even small everyday choices can create a sustainable future for upcoming generations.

READ THE QUESTIONS AND SELECT THE CORRECT OPTION (A, B, OR C).

1. What is one of the most critical environmental challenges mentioned in the text?

a) Air pollution in big cities
b) Plastic pollution in the oceans
c) Deforestation in rainforests

2. What happens to millions of tons of plastic waste each year?

a) It is completely burned in special plants.
b) It ends up in oceans, harming ecosystems.
c) It disappears naturally within a few weeks.

3. What does "3 Rs" stand for in environmental care?

a) Repair, Replace, Restore
b) Reduce, Reuse, Recycle
c) Remove, Refuse, Rethink

How can individuals contribute to a sustainable future?

a) By using single-use plastics daily
b) By sorting recyclables and using reusable items
c) By ignoring daily energy consumption

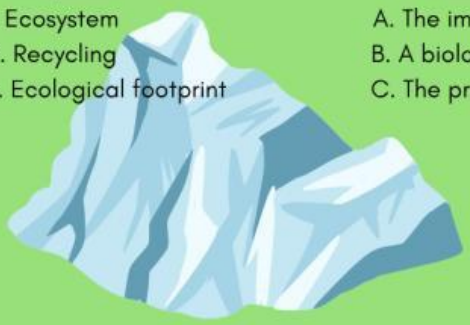

READ THE STATEMENTS AND DECIDE IF THEY ARE TRUE OR FALSE.

1. Single-use plastic bottles do not affect marine life. [True / False]
2. Small everyday choices can help protect the environment. [True / False]
3. Sorting recyclable materials is an effective habit to reduce waste. [True / False]

MATCH THE KEY VOCABULARY ON THE LEFT WITH ITS CORRECT DEFINITION ON THE RIGHT.

Concept	Definition
1. Ecosystem	A. The impact of a person or community on the environment.
2. Recycling	B. A biological community of interacting organisms and their environment.
3. Ecological footprint	C. The process of converting waste materials into new materials.
