

MODERN TRANSPORTATION IN CITIES

READING PASSAGE

Đọc đoạn văn dưới đây và trả lời các câu hỏi.

Transportation is an important part of our daily life because it helps us travel to school, work, and other places. In many big cities, there are different ways to move around, such as buses, trains, cars, and bicycles. However, having too many cars and motorbikes on the road creates heavy traffic and air pollution. To solve this problem, many cities are encouraging people to use public transport like electric buses and underground trains. These vehicles can carry many passengers at the same time, which reduces the number of private cars on the street. In addition, riding a bicycle or walking for short distances is not only cheap and eco-friendly, but it is also great for our health. In the future, cleaner and faster transport will help make our cities better places to live.

QUESTIONS

1. Why is transportation important in our daily life?
 - A. It helps us make new friends.
 - B. It helps us travel to school, work, and other places.
