Classifying Galaxies

[문제] 괄호 안에서 어법상 알맞은 것을 고르시오.

Kevin Schawinski was a young astronomy researcher ① (studying / studied) black holes and the evolution of galaxies at the University of Oxford.

This might sound exciting, but his job there was dull and time-consuming.

He had to classify around one million images of galaxies according ② (to / with) their shape.

Since they all looked ③ (similar / similarly) but were actually shaped slightly differently, the best way to do this was to sort them while ④ (looking / looked) at each one individually.

Of course, this would require a tremendous amount of time. It took Schawinski a whole week ⑤ (to classify / classifying) just 50,000 galaxies. He thought, "But what about the remaining 950,000?"
