PART E. READ AND ANSWER THE QUESTIONS (10)

Artificial Intelligence (AI)

Artificial Intelligence, also known as AI, is little by little modifying human behavior for good and bad. Under this perspective, there are some crucial topics that need to be observed to get the best of it, and undoubtedly, get rid of the harm it might cause to the mankind.

On the one hand, AI promotes faster and more efficient human processes because it permits to reduce time consumption on productive activities and eliminates potential mistakes in whichever human industry. For example, the elaboration of medical devices can be clearly benefited when artificial intelligence is programed not only to detect and discard defective products, but also to reduce production time and improve the use of limited resources. As a result, people can enjoy higher levels of health and even live longer.

On the other hand, it has been observed that AI facilitates certain human activities so much that people tend to become too lazy and comfortable. Facts which are not so convenient in some human areas like education. For instance, the right "prompt" makes it extremely simple for a lot of university students to get effortless essays without even thinking about any arguments. It could result very scary if this student soon becomes a physician who does not have the qualification to cure a patient. Under these circumstances, AI might be promoting future weak minds that could become unable to make their own decisions in the future, or easily be dominated by smarter ones.
