SMALL

The school vegetable garden is a beautiful and environmentally friendly place located in the school area. It is surrounded by green plants, trees, and a simple brick wall. The garden consists of several small planting beds arranged neatly. One of the most interesting features of the garden is the colourful border made from used plastic bottles. The bottles are painted in various colours, such as pink, blue, green, yellow, black, and white. This creative idea makes the garden look more attractive while reducing plastic waste.

The garden is filled with various kinds of vegetables and plants. Many eggplant plants grow in the planting beds. They have green leaves, strong stems, and small purple flowers. Some plants have already produced young eggplants. Other green plants can also be seen around the garden. The soil looks fertile and is covered with organic materials that can help the plants grow. There are also small wooden sticks used to support some plants.

The school vegetable garden is not only beautiful but also useful. It provides a good place for students to learn about plants, agriculture, and environmental conservation. By using recycled plastic bottles as garden decorations and borders, the garden teaches students the importance of reusing waste. The garden also creates a fresh and green atmosphere at school. Overall, the school vegetable garden is a simple, creative, and educational place that combines gardening with environmental awareness.

B. Identify the parts of the descriptive text.

Part of Text	Paragraph	Your Answer
Identification	Paragraph _____	What place is being described? Where is it located?
Description	Paragraph _____	What does the garden look like? What plants and objects are found there?
