

Click True if the statement is correct. Otherwise, click False.

1. Competition happens when organisms need the same limited resources, such as food, water, or space.
2. Predation is a relationship in which one organism hunts and eats another organism.
3. In predation, both the predator and the prey benefit from the relationship.
4. Two plants growing close to each other may compete for sunlight, water, and nutrients.
5. A predator is the organism that is hunted and eaten by another organism.
6. Two birds are searching for the same limited supply of seeds in a field. This is an example of competition.
7. A frog catches and eats a grasshopper. This is an example of predation.
8. Two deer fighting over access to food in a forest demonstrate competition.
9. A snake eats a mouse. In this situation, the mouse is the predator.
10. Several plants growing in a small garden compete for sunlight and water.
