6 Match the questions to the paragraphs.

/ 3

The Heart

- What does the blood do?
- How can you keep your heart in shape?
- What does each side of the heart do?
- Do we feel with our heart or with our brain?

— In the past, people thought that emotions came from their hearts. Maybe because the heart beats faster when a person is scared or excited. Now we know that the heart speeds up because the brain sends the order.

— Your heart is like a pump that circulates blood. The right side of the heart receives blood from the body and sends it to the lungs. The left side does the opposite: it receives blood from the lungs and pumps it out to the body.

— The blood gives us the oxygen and nutrients that we need to live. It also transports the waste to the organs that eliminate it.

— Remember the heart is a muscle; you need to exercise it. Try to be active every day for at least 30 minutes! Eat at least three servings of fruits and vegetables each day. Avoid junk food and soft drinks.

1. What does the blood do?

2. How can you keep your heart in shape?

3. What does each side of the heart do?

4. Do we feel with our heart or with our brain?

7 Circle the correct words.

/ 1

The robot COOL-830 can eat / breathe metal. Its respiratory / digestive system is responsible for this ability. Its organs include an esophagus, a stomach and intestines / lungs.
